

NZ STICK Insect

Acanthoxyla & Clitarchus Species

These two species of stick insects are native to New Zealand. Unlike many overseas stick insects they do not have wings. When disturbed, a stick insect will often fall to the ground and 'play dead' – sometimes for hours. The New Zealand stick insect can be up to 150mm long.

Some Tropical

STICK

insects can GROW to

33cm

long – the LENGTH of your FOOT!
